HAMILTON WATCH COMPANY

LANCASTER, PENNA.

U. S. A.

PREFACE

Hamilton Parts Catalogs are compiled and arranged primarily for watch repairmen who service Hamilton watches. In addition to a Master Assembly List detailing all sub-assemblies and parts this catalog contains a Numerical Parts List, an Alphabetical Parts List, a Photographic Parts List, and a List of Recommended Spare Parts. Page number cross reference from the Numerical to the Alphabetical and from the Alphabetical to the Master Assembly Lists simplifies identification and location of parts.

The Master Assembly List should prove especially helpful to the watch repairman. It not only lists every part and sub-assembly but, as many a repairman will quickly recognize, the parts and sub-assemblies are arranged in the order in which they are re-assembled after repairs and/or cleaning. The Assembly List, therefore, can be used as a reliable guide to re-assembly. On familiar grades of Hamilton watches this feature will be of little interest. But in servicing new and unfamiliar Hamilton movements such information can be of considerable assistance to many watch repairmen. It should be noted here, however, that the ORDER OF RE-ASSEMBLY SHOWN in the Assembly List IS NOT necessarily THE ONLY ACCEPTABLE ONE. Infinite variations of this order, particularly on details, are both possible and acceptable.

It will be of some help to the user of this catalog to note the word order used on part names. The noun is always listed first followed by the necessary words of specific identification. Example, Bridge, barrel; Wheel, escape; not barrel bridge or escape wheel.

HOW TO USE THIS PARTS CATALOG

WHEN PART NAME IS KNOWN

Find the part name in the Alphabetical list, note its part number. Reference then can proceed direct to the numerically arranged List of Recommended Spare Parts, to the Photographic Parts List or, by page number cross reference, to the Assembly List. Note: If part name is NOT listed in the Alphabetical List it is not procurable.

WHEN PART NUMBER IS KNOWN

Reference to the Numerical List will provide page number cross reference to the Alphabetical List and thereby provide part name. Cross reference from the Alphabetical to the Assembly List can be made as described above. Direct reference to Photo Parts List and the List of Recommended Spare Parts can, of course, be made. Note: If part number is not listed in the Numerical List it is not procurable.

WHEN NEITHER PART NAME OR NUMBER IS KNOWN

Refer to Photo Parts List and attempt to identify actual part with one illustrated. Upon identification cross reference, by part number, can be made to the Numerical List or List of Recommended Spare Parts and subsequently to the Alphabetical and Assembly Lists. If and when a part cannot be identified, try to determine the sub-assembly to which it is related. The Assembly List now arranged in the order of re-assembly should prove especially helpful here. Since the Assembly List includes part names AND part numbers cross reference can proceed in any direction. If identification of a part proves impossible send the part or sub-assembly to the Material Sales Department, Hamilton Watch Company, Lancaster, Pa. Identification will be made and promptly returned.

* 39060						Hamilton 6/0 Size Wrist Watch (Employs case #39059)	1

ø Watches supplied on Marine Corps Contract NOm 38713 employed three slightly different cases some parts of which are interchangeable between the different cases. See Parts Price List (pps. 18 and 19 of this Parts Catalog) for details of interchangeable case parts. The use of any of the case parts herein shown as available components for repair purposes does not necessarily insure that a watch so repaired will comply with the waterproof specifications of the contract on which the watch was originally furnished. The Hamilton Watch Company, the contractor, cannot therefore assume any responsibility for the waterproof quality of any watch to which the subject parts have been fitted.

** While the cases furnished on Marine Corps Contract NOm. 38713 appear to be identical, three slightly different cases were employed. Each case is identified by a separate part number; and each complete assembly employing a different case is identified by a separate part number. Assembly Unit Part No. 39030 employs case part number 39028; Assembly Unit Part No. 39054 employs case part number 39047, and Assembly Unit Part No. 39060 employs case, part number 39059. Some interchangeability of case parts is possible; indication of this is provided in the nomenclature column opposite each part name and the quantity of recommended spares adjusted accordingly.
